

Hello folks!

I also have researched the cancer topic a little bit, so I thought it could be helpful to share what I have found so far. I have divided the information into three groups:

1. Cancer alternatives, part 1

In this message, information is presented which you can show to an open-minded oncologist. It is basically about vitamins, minerals, and other nutrients.

2. Cancer alternatives, part 2

Here you will find some information about cancer treatments which seem to be promising but were suppressed by the cancer establishment. I do not think it is a good idea to show this info to your oncologist. He may arrange for you to be examined by a psychiatrist...

3. Cancer alternatives, part 3

Here I give a very short resume on cancer and ozone therapies. As regards your oncologist: see #2

The text files are stored in the *open document* format, developed by Sun Microsystems. This is a file format similar to the Microsoft Office file format. To view these documents, you need to download for free the office application OPEN OFFICE (or NeoOffice for MAC OS X) and install on your computer.

The advantage of the *open document* format is that it works on all kinds of computers (Linux, Apple Mac, SPARC, and, yes, even Windows PC).
