Carnivora Treatment

Carnivora is a patented extract of the Venus Fly Trap plant (*Dionaea muscipula*) that was developed by the German oncologist (cancer specialist) Helmut Keller, M.D. According to medical reporter Morton Walker, D.P.M., 22 "Since the early 1970's, many thousands of patients have been treated with Carnivora. Among them has been President Ronald Reagan who received the substance postoperatively following his operation for malignant polyps of the colon. The President took Carnivora drops for their healing and preventive powers against cancer recurrence."

"Actor Yul Brynner also received dosages of Carnivora in injections and/or Carnivora drops." Yul Brynner's lung tumors were rapidly diminishing in size until he foolishly followed the recommendation of a New York City oncologist and failed to keep up with the remedy

"Carnivora has a proven 82 to 87% remission rate for most types of carcinoma when the patient's immune system has not been compromised by conventional, allopathic chemotherapy or radiation therapy."22

As Carnivora is a relatively new product, no one knows how many different organisms it can inhibit, or kill. In addition to its immune stimulating properties, the Carnivora extract "has" been used successfully for the treatment of chronic diseases including most forms of cancer, neurodermitis, ulcerative colitis, Crohn's disease, multiple sclerosis, all types of herpes infections, primary chronic polyarthritis, and almost any immune deficiency state," and AIDS.

After it's use, Harvey Bigelsen, M.D. was so impressed with the reduction of pleomorphic organisms in a patient's blood that he ordered a supply of Carinvora for his own use.22 Pleomorphic organisms are micro-organisms that change form and function depending upon their surrounding environmental conditions.

Dorothea M. Linley, M.D.

Dorothea M. Linley, M.D. says, "In August 1986, I came down with a flu-like illness: pains in muscles, back, headache, fatigue and even my hair was painful. Fever and migrating arthritis followed by cardiac fibrillation which was controlled by oral magnesium. A blood test for Lyme disease was positive. "It settled in my knees, the left swelling so severely I needed crutches. I took 1 gram of tetracycline daily for 3 weeks

and then 2 grams daily for three more weeks. Then my stomach rebelled and it was stopped. I was left with 50% reduced motion in both knees. Three months later I learned that the North (negative, south seeking) magnet would reduce swelling and pain. I applied a North Pole magnet to both knees for 30 minutes twice a day⁵. In one week my knee flexion was doubled. In 6 months flexion was almost normal except for something that didn't feel right in the middle of the joint."

"Two months later I experimented with germanium sesquioxide⁶. On a dose of 900 mg daily the right knee returned to normal in 3 days and after reducing the dose to 300 mg daily, the left knee took about 2 months to become normal. I was 5 years without any symptoms."

"In May 1992 my left knee started swelling and a blood test was positive for Lyme. Whether this was a new case or a return of the first attack I do not know. What I did know was that I had no desire to take antibiotics again. I had just finished treatment for Candidiasis.

"In mid-July I learned about Carnivora [*Dionaea muscipula*, Venus Fly Trap plant extract] from Morton Walker's article in the Townsend Letter [for Doctors]⁸. I learned that Carnivora would kill bacteria, yeast, parasites and viruses without harming beneficial intestinal bacteria.

"I believe the Carnivora has killed the Lyme bacteria as well as Candida overgrowth. I lost 10 pounds, my skin is younger looking, my bowels are functioning normally for the first time in my life, my fingernails are hard and growing well, and my digestion is improved, needing fewer digestive aids.

"I hope my story will help those many patients suffering from chronic illness which may be due to Lyme. I was fortunate in that I did not take antibiotics until after a positive blood test. Those who treat symptoms clinically typical of Lyme before developing a positive blood test will never test positive and thus obscure the diagnosis. There are many people out there in this situation."

I would be happy to help you let people know of the efficacy of Carnivora for Lyme disease. Although my Lyme was symptomatic for only a few weeks, I have firsthand knowledge of how people with Lyme suffer. It is obvious that treatment with antibiotics alone is mistreatment. And I know with absolute certainty that for those who are able to pursue the methods I have, including Carnivora, Lyme can be cured without antibiotics. The many people who have been treated with antibiotics one or more times but continue to be symptomatic can be helped as well with these natural methods.

Many people are suffering with Lyme. My recent experience puts me in a unique position to help those willing to consider alternatives. For all these reasons, I wish to encourage people in any way I can to seek alternative treatment and Carnivora for their Lyme disease.

Please contact me for any assistance you would like. I am comfortable doing public appearances, having done publicity tours in connection with my first book, Traditional Foods Are Your Best Medicine, 15 years ago. I do not seek publicity, but sometimes the course of events make it clear that one must be willing to step forward for a cause.

Ron S., N.D.

Hello Richard,

You may recall that we spoke a month or so ago when I ordered Carnivora drops and capsules to use as part of my self-treatment for Lyme disease. I have used Carnivora drops daily, and six capsules per day, since receiving the product in early August. As I indicated, I used no antibiotic treatment. My self-diagnosis in mid-July was based on severe symptoms and an elevated IgG/IgM titer and a positive western blot for IgM, and was confirmed by a medical doctor and a naturopathic physician; there is no question but that I had Lyme. By August 20th I was completely symptom free and full strength, and remain so; I have played vigorous singles tennis and begun running again regularly during the past week. I continue with Carnivora as part of my ongoing therapy to stay on top of the problem. I feel that Carnivora has been a real key. I thought you might like to know this, and I commend you for bringing Dr. Helmet Keller's quality Carnivora product to America and the world.

Please feel free to use this information to let other practitioners know about Carnivora's healing powers.

Ron S., ND
