CARNIVORA RESEARCH INC, INTERNATIONAL DOES NOT CONDONE THE USE OF ITS PRODUCTS THAT ARE NOT IN ACCORDANCE WITH VARIOUS GOVERNMENTAL AGENCIES THAT MAINTAIN JURISDICTION OVER THE METHODS OF ADMINISTRATION OF CERTAIN PRODUCTS. THE ADMINISTRATION OF CARNIVORA FOR SUBLINGUAL AND/OR ORAL USE IS LEGAL IN MOST COUNTRIES WHEN UTILIZED AS A NUTRITIONAL SUPPLEMENT. THE COMPANY ASSUMES NO RESPONSIBILITY AND IS HEREBY INDEMNIFIED AGAINST ANY AND ALL CLAIMS FOR THE USE OF ITS PRODUCTS THAT MAY NOT BE IN ACCORDANCE WITH THE APPLICABLE REGULATORY AGENCY. CARNIVORA RESEARCH INC. INTERNATIONAL DOES NOT PURPORT TO DIAGNOSE, TREAT, CURE OR PREVENT ANY ILLNESS OR DISEASE.

The following statements have not been evaluated by the Food and Drug administration. This product is not intended to diagnose, treat, cure or prevent any disease.

CARNIVORA

Cancer and AIDS Fighter

A German doctor achieves remarkable results with this carnivorous plant.

By Morton Walker, D.P.M.

Following the removal of malignant polyps from his colon, President Ronald Reagan sent for an herbal extract to take as a preventive against the cancer's spread. Thereafter, he drank 30 drops of this extract, Carnivora, in a glass of purified water or herb tea four times a day.

According to records kept by the extract's manufacturer, the former U.S. president still buys these drops today.

Carnivora is a patented phytonutrient derived from the plant Venus' Flytrap (*Dionaea muscipula*). This is a standardized solution used in the treatment of chronic diseases, including most forms of cancer, ulcerative colitis, multiple sclerosis, all types of herpes infections, chronic arthritis, and almost any immune deficiency state, including AIDS. In cases of cancer, Carnivora works therapeutically to shrink solid tumors, according to its proponents. Also, it works best if the patient has not previously undergone chemotherapy or radiation therapy. Carnivora's proponents also claim that in other clinical applications, it has been effective in boosting immune function and eliminating the human immunodeficiency virus (HIV) from the blood.

Carnivora can be administered as drops for use sublingually or by inhalation, or it can be given by injection or infusion. Laboratory studies indicate that purified Carnivora is safe, and its new drug application is pending approval by the German Food and Drug Administration. It is readily available for application to patients by physicians in Germany and other European countries. Carnivora remains unapproved by the U.S. Food and Drug Administration (FDA), however, and cannot be imported or used legally except by people suffering from life-threatening illnesses such as cancer and AIDS.

\*UPDATE NOTE: Pure Carnivora is now legally available in the US as an herbal remedy and can be administered sublingually, orally and by Inhalation. It contains no glycerin, alcohol propylene glycol or other excipients / fillers.

The discoverer of Carnivora is a researcher and oncologist, Helmut Keller, M.D., who first studied the Venus' Flytrap in 1973. He continued his studies Boston University in 1980. He moved to Germany a year later to find more freedom for his Carnivora research. I visited Dr. Keller at his clinic in Germany, in June 1991, and I was given access to his files. I have also interviewed about 50 of his patients. One was 65 year old Betty Williams of Ames, Iowa. Diagnosed with inflammatory breast disease, the most lethal form of breast cancer, she sought treatment from Dr. Keller.

Mrs. Williams case study reveals that the skin of her right breast was at first swollen, warm, indurated, and painful. All of the symptoms resembled an infection, but diagnosis by biopsy revealed that it was inflammatory carcinoma. Death was likely to occur within a matter of weeks, and the doctors had no hope for her survival. By the time three American oncologists separately confirmed the diagnosis and prognosis, her breast was turning black.

"The oncologists told me there really was no hope of saving my life," Williams explained. "They said that they would try chemotherapy; if I was still alive, they would then give me radiation; if I remained alive, they would finally send me for surgery. I asked, 'What will all this do for me?' And they answered, 'Just buy you a little time.' Immediately, we left for me to have Carnivora treatment.

I received one three-hour intravenous infusion a day, Monday to Friday. I had no side effects except to feel better. Gradually I gained a sense of well-being. The appearance of my breasts came back to normal. The blackness and inflammation totally disappeared," Williams said.

Mr. and Mrs. Williams remained with Dr. Keller for three months. "At home, now, I take Carnivora five days a week, administered by my husband," Mrs. Williams explained. I speak to Mrs. Williams about once a month. Her cancer is completely gone and, since the time of her deadly diagnosis nearly 2 ½ years ago, it has not returned. Now, my wife, who has breast cancer, is taking Carnivora regularly as part of her cancer therapy. She has been doing so since our first visit to Germany.

In addition to its success in cancer, Carnivora has had a dramatic effect on patients infected with HIV, the virus cited as the cause of AIDS. Dr. Keller learned that various strengths of the Carnivora formulations work for all diseases in which immune stimulation and modulation are required. Besides having the ability to reduce the growth rate of tumor tissue, Carnivora increases the number and activity of the sick person's T-helper cells and other immune system components. I have observed laboratory test readings of HIV-positive patients, recorded by Dr. Keller and some American holistic physicians. The patients T-helper cell counts rose from as low as 11 per cubic millimeter of blood to well beyond 700, while the T-suppressor cells decreased sharply. This makes the individual's important helper/suppressor ratio almost normal.

The most surprising result has been Carnivora's direct effect in reducing the viability of the HIV. Quite simply, an identified biochemical ingredient in Carnivora kills the AIDS virus. Also, the Beta-2 Microglobulin test, which measures the amounts of plasma proteins produced by HIV, decreases. This test for Beta-2 levels is judged to be the most accurate of all predictors of HIV progression to AIDS. A decrease in Beta-2 levels indicates that the patient is not advancing to full-blown AIDS.

Also, any patient who suffers from a life-threatening illness has the right to import a three-month supply of Carnivora or other non-FDA-approved remedies for his or her personal use. This being done, there are several methods by which Carnivora may be administered for the American patient.

First, the patient or a skilled person like a nurse can give subcutaneous, intramuscular or intravenous injections at home. Additionally the extract may be administered sublingually, and orally in the form of p o capsules. When Carnivora has been used in its most purified form, which is protected under patents by owner Richard Jason Ostrow, no side effects have been reported. Second, by acting merely as the medical technician and following Dr. Keller's protocol, your own American physician can administer the treatment.

Indeed, it is best that you have medical supervision when you add Carnivora to your treatment program against cancer, AIDS, or other pathologies.

## THE MEDICINAL USES OF CARNIVORA

In 1973 the German physician Helmut Keller MD, in search of a new phytonutrient to combat cancer, first experimented with an extract prepared from the fresh squeezed juice of the carnivorous plant Venus' Flytrap (*Dionaea muscipula*). Since the early 1970's, Dr. Keller has been using this extract to treat

Many types of tumors in adults which no longer respond to chemotherapy and/or radiation therapy. He claims that even in very severe cancer cases use of this extract has improved quality of life and relief of pain, and remissions have been achieved. Carnivora extract is used in three forms:

Carnivora DROPS which are administered by mouth, and the INJECTABLE SOLUTION which is administered intravenously, subcutaneously or intramuscularly. Carnivora capsules are taken orally typically as an adjuvant therapy along with the extract form. Carnivora originates from Germany and the United States and is now marketed around the world.

UPDATE NOTE: ADVANCED PROTOCOLS HAVE BEEN AVAILABLE SINCE THE RELEASE OF THIS ARTICLE SEVERAL YEARS AGO. HIGH-DOSE SUBLINGUAL ADMINISTRATION OF PURE CARNIVORA EXTRACT IS UTILIZED AS THE PRIMARY THERAPY WITH OTHER POTENT NON-TOXIC COMPOUNDS. CARNIVORA MAY ALSO BE USED FOR INHALATION PURPOSES VIA A NEBULIZER AND OR COLD VAPORIZER.

PLEASE CONTACT CARNIVORA RESEARCH, INC. INTERNATIONAL FOR INFORMATION PERTAINING TO THESE PROTOCOLS.

Dr. Keller claims scientific studies on Carnivora extract reveal the following therapeutic effects:

- 1.Cytostasis
- 2.Mitotic Inhibition
- 3.Immunoinduction & Immunomodulation
- 4.Virucidal
- 5.Analgesic

Dr. Keller states that promising therapeutic results have been obtained in the treatment of:

- 1.Adult malignant tumors / Leukemia / Lymphoma / Including most forms of cancer
- 2.Ulcerative colitis
- 3.Crohn's disease
- 4.Neurodermitis
- 5.Lyme disease
- 6.Primary chronic polyarthritis
- 7.Psoriasis artropathica

8. Herpes infection

9. Immune deficiency diseases (Chronic Fatigue Syndrome, Influenza, the Common Cold, etc.)

10. Hepatitis

NOTE: The following is an excerpt from one of the several patents for Carnivora: Other series of experiments with germs and bacteria, namely Pseudomonas aeruginosa, Proteus mirabilis, Staphylococcus aureus, Streptococcus pneumoniae, Escherichia coli, Staphylococcus epidermidis, streptococci of the group B (hämolyzierend), Streptococcus pyogenes (A), Candida albicans and Aspergillus fumigatus, on the basis of cultures have proved that also positive effects are achieved, even after 24 hours the germs for the most part had died.

11. HIV infections, LAS, ARC, & AIDS

He claims that total and partial remissions have been achieved in Glioblastomas, Hypernephroma with lung metastases (not bones), Pancreas carcinoma, viral induced tumors in the ear, nose and throat, Adenocarcinomas of the lung and colon. In CML and CLL (leukemia) remissions time is prolonged. He says in all the other malignancies Carnivora extract is decreasing the suppressor cells, increasing the helper cells and natural killer cells and therefore improves the patient's general condition.

Dr. Keller's Dosage & Treatment Schedule for Carnivora in Adults:

Please call Carnivora Research, Inc. International at 1 866 836 8735 for protocol information. Call 001 203 532 0957 if calling from outside the US.

NOTE: For patients suffering from emphysema, chronic lung infections, lung or bronchial cancer Carnivora should be inhaled by means of a nebulizer in conjunction with systemic CARNIVORA therapy.

ABOUT THE AUTHOR: Dr. Morton Walker is a Medical Journalist who has published more than 75 books in the field of Alternative and Complementary medicine.
