

November 9, 1939

My dear Dr. Rife:

This notify that today I have received the shipment of bulbs-- and today only--that was sent to us in August. One of them is broken to pieces and has therefore not been delivered. I do not know if they were insured against breakage, but I have had to pay customs duties on both. We will try out the complete bulb tomorrow and see what are the results.

Always yours,
B. Winter Conih.

My dear Dr. Repe.

I am delighted to get your letter of 29th ult. and expect very sincerely to hope you have broken a rib & had some pleasure in it - it is very encouraging to know that you are a present non-united Belam Rays. It would indeed be a dream of delight to me if there was now some real prospect of carrying through our humanitarian hopes & ideas. Immediately you are satisfied that definite continuity & stability are assured in your new design of machine, I should indeed be grateful to know. The troubles we have had through Belam Rays with their constant discouragement, waste of time, effort & money, have caused us all a little.

But, speaking personally, I am still hopeful because I know your spirit is indomitable & your mission clear in its field & scope. If any useful purpose could be achieved by my going to see you, I would make every effort.

Thank you for your good kindness in wishing Dr. Ralph Lewis to go & see you: I hope this will succeed.

With our sincere wishes to Mrs. Kate & yourself for health & happiness
properly & Peace profound, I am ever yours sincerely.

B. W. Foster

My dear Dr. Rife:

I am delighted to get your letter of the 29th ultimo, but regret very sincerely to note that you have broken a rib and have some pleurisy. It is very encouraging to know that you and a friend now control Beam Rays. It would indeed be a dream of delight to me if there was now some real progressprospect of carrying through our humanitarian hopes and ideas. Immediately you are satisfied that definite constancy and reliability are assured in your new design of machine, I should indeed be gratified to know. The troubles we have had through Beam Rays with their consequent discouragement, waste of time, efforts and money, have soured us a little. But, speaking personally, I am still hopeful because I know your spirit is indomitable and your intuition clear in its view and scope. If any useful purpose could be achieved by my going to see you, I will make every effort. Thank you for your great kindness for inviting Dr. Ralph Lewis to go and see you. I hope this will eventuate. With our sincere wishes to Mrs. Rife and yourself for health and happiness; prosperity and peace profound, I am ever

Yours sincerely,

B. Winter Conib.

My Dear Dr. Rife.

I have just heard from the Emperor AmORC that he has received your very kind invitation to visit you at San Diego. May this prove a very memorable meeting for both of you. Your deep. focus lens appears really promising & I have asked word to Mr. William Churchill about it asking him whether he would like to make investigation direct. Perhaps he may through a representation in R.S.A. Please keep me very fully informed about your new model Ray machine. The whole trouble about its inconsideration in action may be due to the bulb or generator, don't you think? It would appear that some oxidation takes place in the gas in the bulb which becomes insensate during its impurities in the gas & action on the metal holding the filaments. But I tell you that of the two replacement bulbs sent me by Beau Ray, one was all crunched up when it arrived? I have received a letter from Dr. Locke under date 1.1.40 saying he is working the old machine and suggesting that of Parker two parts to cure D.B.N.Z. but that the machine is not sensitive in action.

He talks of coming on again to England to enlarge on his ideas by carrying out his original ideas & of bringing out an enlarged machine.

I should much have preferred, in view of my past experience, to have dealt only with you & to have received the new machine from you.

You do not tell me how on your eyes? Please do so in your next -

With sincere good-wishes to Mrs. Rife & yours for Peace Proposed -

I am, Ever yours sincerely,

Dr. William Rife.

My dear Dr. Rife:

I have just heard from the Emperor amore that he has received your very kind invitation to visit him at San Diego. May this prove a very memorable meeting for both of you. Your deep focus lens appears really promising and I have sent word to Mr. Winston Churchill about it, asking him whether he would like to make investigation direct. Perhaps he may through a representative in U.S.A. Please keep me very well informed about your new model Ray machines. The whole trouble about its inconstancy in action may be due to the bulb or the generator don't you think? It would appear that some radiation takes place in the gas in the bulb which becomes inconstant owing to impurities in the gas or action on the metal holding the filaments. Did I tell that of the two replacement bulbs sent me by Beam Rays, one was all smashed up when it arrived? I have received a letter from Dr. Couche under date 1-1-40, saying he is using the old machine and suggesting that it takes two years T.B. or Q., but that the machine is not constant in action. He talks of coming on again to England to enlarge on his ideas of carrying out his original ideas and of bringing over an enlarged machine. I would have much have preferred, in view of my past experience, to have dealt only with you and to have received the new machine from you. You do not tell me how are your eyes? Please do so in your next. With sincere good wishes to Mrs. Rife and yourself for peace profound, I am ever yours sincerely -B.W.G.
